## EDUCATION

### Cal Polytechnic Pomona — B.S. Computer Science (3.6 GPA)

*Expected Graduation: 2026*

**Programs:** Women in Animation Mentee, Computing Talent Initiative Accelerate, CodePath, SheCodes, ASWF Summer Learning Mentee

### Emile Cohl Atelier — Environment Artist Cohort (1 of 20 selected)

*March 2022 – June 2022*

Completed 300+ hours of coursework in visual scripting, 3D lighting, rendering, texturing, and world building

## SKILLS

- **Programming Languages:** Python, Java, C#, HTML/CSS, JavaScript, TypeScript
- **Frameworks & Libraries:** React, Tailwind CSS
- **Tools & Software:** GitHub, Adobe Photoshop, Unity, Houdini, Autodesk Maya/Arnold, Figma

## EXPERIENCE

### Web Development Tech Fellow — CodePath

*August 2024 – April 2025*

- Guided 25+ students with troubleshooting, project work, and team collaboration during activities
- Mentored students on **JavaScript**, **HTML**, and **CSS** to help them stay on track with assignments and labs
- Worked with instructors to run group activities and solve technical issues to improve student learning

### Quality Assurance — [Cara.app](#)

*June 2024 – November 2024*

- Supported 1M+ users by identifying and documenting bugs for product releases using Vercel and iOS TestFlight
- Tested features across multiple browsers and operating systems using dev-provided repro steps, reporting pass/fail results and any regressions found
- Managed daily requests and reporting for features, fixes, and bugs

### Front-End Developer Intern — [Finding A Time \(Open Source\)](#)

*May 2024 – August 2024*

- Built an interactive scheduling tool with drag-to-select input and a gradient overlay that visualizes user availability in real time
- Collaborated with team to design dynamic grid updates, drag-to-select functionality
- Leveraged **React** and **TypeScript** to create intuitive front-end components, used **Figma** to design a user-friendly interface

## PROJECTS

### AutoMatLinker — Maya (Python)

- Created a Maya tool that automates shader assignment and PBR map connections to selected meshes
- Implemented smart name-matching to reuse shared textures across asset variants, improving assignment accuracy
- Built a PyQt interface to run the tool across multiple meshes with fallback warnings for missing textures

### Tropical Plants Procedural tools — Houdini (VEX)

- Created parametric leaf and radial fan systems with adjustable leaf count, width, and shape variations
- Designed procedural leaf and bark textures with color variants, vein patterns, and material maps
- Integrated modeling, texturing, and shading workflows into reusable digital assets for stylized vegetation

### Electric Shift VR Puzzle Game — Unity (C#)

- Developed a VR level teaching Ohm's Law through interactive, hands-on circuit puzzles
- Playtested with positive feedback on gameplay feel and concept clarity
- Coordinated with the team to integrate assets, maintain gameplay logic, and smoothen player experience

### Builder Beavers, SheCodes — Unity (C#)

- Led a team of 8 through a semester-long build of a pixel art game in Unity, coordinating tasks and timelines
- Programmed select and drag UI feature and presented the finished project to faculty judges on Demo Day
